

Rattlesnake Avoidance Training

* Rattlesnakes are found throughout the southwest in areas that dogs love to explore. A bite from a rattlesnake can severely injure or even kill your dog and veterinary care for bites is usually very expensive to treat!

* Our rattlesnake avoidance training will teach your dog how to recognize the scent, sound and sight of any rattlesnake they encounter. Our training is quick, safe, humane and proven to teach your dog to avoid all rattlesnakes.

* For the safety of your dog, we use carefully hooded, live rattlesnakes, that your dog is allowed to encounter, in a controlled environment. Your dog will be fitted with a check cord and remote control-led electronic collar that simulates a rattlesnake bite when activated by a professional dog handler.

* The process does not injure your dog or the snake and is repeated until your dog understands that rattlesnakes are to be avoided at all cost!

* We recommend training your dog after 6 months of age in early spring - summer if possible, when rattlesnakes become more active. Yearly training is also recommended to refresh and strengthen your dog's rattlesnake awareness.
